Project Name	Project - IoT Based Smart Crop Protection System for Agriculture
Maximum Marks	2 Marks

#### Customer Problem Statement:

<b>I am</b>	Farmer	Farmers who do agriculture, and provide a great contribution in world food needs.
<b>I'm trying to</b>	Protect crops from birds and animals	They try to achieve maximum crop production and guard crops from animal and birds.
<b>But</b>	I cannot stop animals and birds while I am on any other work.	They cannot stay near field all the time since for a farmer growing crops is only a part of their activity.
<b>Because</b>	It is impossible for me to stay guard all the time.	They have lot of other activity in which they need to focus too. So at that time they cannot protect crop from animals and birds.
<b>Which makes me feel</b>	Worry about crops and production.	Crop production get decreased which ultimately led to low profit.
